PROFILE

I'm a data analyst whose rigor is on the transcript: A+ in Business Statistics, A in Mathematics of Business & Finance. I pair that foundation with a marketer's instincts (Business-Marketing diploma), and my work spans SQL and Power BI to machine learning: customer segmentation on 83,590 records, plus a CNN classifier detecting Alzheimer's from brain MRI scans. I don't just report what the data says. I tell you what to do about it.

CORE SKILLS

Data analysis: SQL / MySQL (joins, CTEs, window functions), Python, pandas, NumPy, R, Excel, data cleaning, exploratory data analysis, statistics

Visualization & BI: Power BI, DAX, Tableau, Matplotlib, Seaborn, interactive dashboards, KPI reporting, data storytelling

Marketing & business analytics: Marketing analytics, customer segmentation, churn & retention analysis, ecommerce analytics, Google Analytics, A/B testing, inbound marketing, SEO fundamentals

Tools & workflow: ETL, data modeling, scikit-learn, clustering, Git, GitHub, Claude Code, Codex

EXPERIENCE

Team Member | Tim Hortons, Canada | Jul 2025 - Aug 2026

Supported high-volume store operations, baking and team coordination in a customer-facing setting.

Ecommerce Analyst (Part-time) | Canadian Outlet Store, Canada | May 2024 - Oct 2024

- Analyzed sales, product and customer data to identify patterns relevant to ecommerce and marketing decisions.
- Maintained recurring performance reports and summarized operational data into business observations.

SELECTED ANALYTICS PROJECTS

Customer Churn Dashboard | Power BI | [GitHub](#)

- Built an interactive dashboard using Kaggle customer data to examine churn rates across demographic groups, subscription plans and geographic regions.
- Added slicers and filters to compare customer groups and explore patterns associated with churn.

Retail & Revenue Analysis | MySQL | [GitHub](#)

- Wrote queries to rank the top three stores by transaction volume, calculate average sales by product, and summarize booking revenue by date and passenger age group.
- Used joins, aggregations and CASE expressions for reporting; applied self-joins to remove duplicate employee records and match records across tables.

Hotel Customer Clustering | Python, pandas, scikit-learn | [GitHub](#)

- Prepared 83,590 hotel customer records for exploratory clustering; removed identifier fields and missing rows, then encoded categorical variables and standardized numeric features.
- Applied K-Means, DBSCAN and HDBSCAN to 78,775 retained records; visualized cluster assignments with PCA and t-SNE to explore customer structure.

Alzheimer's Disease Detection | Python, PyTorch, CNN | [GitHub](#)

- Built a convolutional neural network to classify brain MRI images across four Alzheimer's disease categories, with preprocessing, augmentation, training, and evaluation in a Jupyter Notebook.

EDUCATION & CERTIFICATIONS

Ontario College Diploma, Business-Marketing | Seneca Polytechnic, Toronto | Aug 2023 - Apr 2025 | 3.4 GPA

Class 12 Commerce | M.S. Public Higher Secondary School, GSEB
2021 - 2022 | Approximately 85%

Google Data Analytics Professional Certificate | Coursera | Sep 2025

Data Science, Machine Learning, DL & NLP Bootcamp | Udemy | Mar 2025

Inbound Marketing Certification | HubSpot Academy | Sep 2024

Data Analytics Certification | TOPS Technologies | Oct 2023

LANGUAGES

English: IELTS General Training 8.0/9 (Jun 2025) | **Hindi:** Native | **Gujarati:** Native
